

Assessments & End-of-Course Project — Timeline

T1 AY2026–27 · everything you are assessed on, when it starts, when it is due, and what to hand in.

Your grade is made up of four things: **A1 — Foundations Build (16%)** and **A2 — Applied AI System (20%)**, which together are your Continuous Assessment (36%); **Class Participation (20%)**; and the **End-of-Course Project (44%)**. All release and submission times are **23:59 SGT** and apply to every student. Submit to NTULearn unless a brief says otherwise. **Written components are capped at 1,200 words** (A1, A2, and the End-of-Course Project). The Problem Statement is a **mandatory milestone** of the End-of-Course Project, not a separate grade.

AT A GLANCE

Assessment	Nature	Weight	Released (23:59 SGT)	Due (23:59 SGT)
End-of-Course Project · Milestone 1 — Problem Statement	Individual · mandatory	—	Template released Mon 10 Aug 2026	Sun 23 Aug 2026
A1 — Foundations Build	Individual	16%	Sun 16 Aug 2026	Sun 30 Aug 2026
A2 — Applied AI System	Group · peer-reviewed	20%	Sun 30 Aug 2026	Sun 13 Sep 2026
A2 · Week 5 group check-in (anti-free-rider)	Group · mandatory	—	—	By Sun 6 Sep 2026
End-of-Course Project	Individual	44%	Problem stmt in Wk 3	Sun 20 Sep 2026
Class Participation	Individual	20%	All 6 sessions	End of course

THE DETAIL

1. End-of-Course Project · Milestone 1 — Problem Statement

Individual · mandatory, not separately graded · template released Mon 10 Aug 2026 · due Sun 23 Aug 2026, 23:59

What you submit: A ~1-page problem statement on the provided template. You get written feedback, not a grade — but **submitting it is required for your End-of-Course Project to be counted complete**. It seeds criteria 1 & 2 of the project.

2. A1 — Foundations Build · 16%

Individual · instructor-marked (Rubric 1) · covers Weeks 1–3 · released Sun 16 Aug 2026, 23:59 · due Sun 30 Aug 2026, 23:59

Along the way: Three starter notebooks are provided at release. Your OpenRouter API key was issued on 14 Aug 2026 and covers A1 and the rest of the course.

What you submit: One ZIP: three notebooks (.ipynb) + one combined writeup (≤1,200 words, PDF) + a self-appraisal cover sheet. Name it PE6201_A1_[YourName]_[MatricNumber].zip

3. A2 — Applied AI System · 20%

Group · peer-reviewed (Rubric 1) · released Sun 30 Aug 2026, 23:59 · due Sun 13 Sep 2026, 23:59

Along the way: Your A2 group is confirmed — same as your in-class seating — and the peer-review process is explained in Week 4. Then, **by the end of Week 5 at the latest (Sun 6 Sep, 23:59) — and the sooner the better**, each group flags who is contributing what to the instructor and TA, **with every team member in copy**. Surfacing ownership and any non-performance early de-risks A2 for the whole group: if a member isn't pulling their weight, raise it now, not at the end.

What you submit: A group-built applied AI system with its code in a GitHub repository, a technical writeup (≤1,200 words), and your completed peer reviews. Submitting peer reviews on time is a participation requirement.

4. End-of-Course Project · 44%

Individual · Rubric 2 · Milestone 1 = the Problem Statement above · final submission due Sun 20 Sep 2026, 23:59

Along the way: Problem statement in Week 3; written feedback is at the instructor's discretion.

What you submit: A problem statement, a business & technical trade-off analysis (≤1,200 words), working code in a GitHub repository, and a recorded video presentation / demo.

5. Class Participation · 20%

Individual · Rubric 3 · assessed across all six sessions

What you submit: No separate hand-in — this reflects your engagement across the six sessions (including on-time peer reviews for A2).

Late work follows standard NTU policy. If something has gone wrong, email the course account **before** the deadline rather than after. Questions are always welcome — bring them to class, email, or WhatsApp.
